

True Multi-Touch Capacitive Touch Panel Controller

INTRODUCTION

The FT5X26 Series ICs are the single-chip capacitive touch panel controller with Cortex M0 core for supporting large-sized mutual capacitive touch panel. FT5X26 adopts the mutual capacitance and full screen common mode scan technology, and support true multi-touch capability, ideal for up to 15.6 " panel applications performance. Being coupled with a mutual capacitive touch panel, FT5X26 can implement the user-friendly inputting function and be widely used in various portable devices in large size, such as Ultrabooks, PADs, MIDs and GPS, etc.

As FT5X26 is in a same series, this datasheet will present them together and list differences among them individually in the following sections.

FEATURES

- Mutual Capacitive Sensing Techniques
- Full Screen Common Mode Scan Techniques
- ARM Cortex M0 core MCU
- True Multi-Touch with up to 10 Points of Absolute X and Y Coordinates
- Enhanced Immunity to RF and power Interferences
- Auto Calibration and Compensation for Environmental Variations
- FT5X26 Supports up to 48 TX lines + 72 RX lines
- Fully Programmable Scan Sequences to Support Various TX/RX Configurations
- High Report Rate: Up to 100Hz
- Capable of Driving Single Channel Resistance up to 10K Ω (including both TX and RX lines)
- Capable of Driving Single Channel Capacitance up to 120 pF (including both TX and RX lines)
- Optimal Sensing Mutual Capacitor for each node 1pF~4pF
- Touch Resolution up to 100 Dots per Inch (dpi) or above -- depending on the Panel Size
- 12-Bit ADC Accuracy
- Optional Interfaces : I²C/SPI/USB
- 2.8V to 3.3V Operating Voltage
- IOVCC Supports from 1.8V to 3.6V
- Built-in LDO for Digital Circuits
- Support Win8
- Supports up to 15.6" Touch Screen
- 3 Operating Modes
 - Active Mode
 - Monitor Mode
 - Hibernate Mode
- Operating Temperature Range: -40°C to +85°C
- Package, BGA 160 ball, 5x10x0.6mm, pitch 0.5mm
- Package, BGA 152 ball, 5x12x0.6mm, pitch 0.6mm

1 OVERVIEW

1.1 Typical Applications

FT5X26 accommodate a wide range of applications, some typical examples are listed below.

- Ultrabook
- PAD
- Electronic Book
- MID
- GPS

FT5X26 support large Touch Panel, users may find out their target IC from the following table.

Model Name	Panel		Package			Touch Panel Size
	TX	RX	Type	Pin	Size	
FT5826QSL	36	48	BGA	160	10x5x0.6mm	≤10.1"

Remarks: The large TP size is supported for Win8.

2 FUNCTIONAL DESCRIPTION

2.1 Architectural Overview

Figure2-1 shows the overall architecture for the FT5X26.

Figure 2-1 FT5X26 System Architecture Diagram

HIS DOCUMENT CONTAINS INFORMATION PROPRIETARY TO FOCALTECH SYSTEMS CO.,LTD., AND MAY NOT BE REPRODUCED, DISCLOSED OR USED IN WHOLE OR PART WITHOUT THE EXPRESS WRITTEN PERMISSION OF FOCALTECH SYSTEMS CO.,LTD.

The FT5X26 is comprised of five main functional parts which are listed as below,

- Touch Panel Interface Circuits

The main function for the AFE and AFE controller is to interface with the touch panel. It scans the panel by sending AC signals to the panel and processes the received signals from the panel. It includes both Transmit (TX) and Receive (RX) functions. Key parameters to configure this circuit can be sent via serial interfaces.

- ARM Cortex M0 core MCU

For ARM Cortex M0 core MCU, larger program and data memories are supported.

Complex signal processing algorithms are implemented with firmware running on MCU and signal process unit to detect the touches reliably and efficiently. Communication protocol driver is also implemented on this MCU to exchange data and control information with the host processor.

- External Interface

- I2C/SPI/USB: an interface for data exchange with host
- INT: an interrupt signal to inform the host processor that touch data is ready for read
- /RST: an external low signal reset the chip.

- A watch dog timer is implemented to ensure the robustness of the chip.

2.2 Power Supply Selection

There are two options for power supply of FT5X26, and it is selected by PSEL pin .

- When PSEL=0, FT5X26 is powered by external Power supply, the voltage is 2.8V~3.6V, connect to VDD3 and VDDA , VBUS is no connected
- When PSEL=5V(VBUS), FT5X26 is powered by USB, the voltage is 4.5V~5.5V, connect to VBUS, VDD3 is around 3V, VDDA is Connected to VDD3.

A voltage regulator to generate 1.8V for digital circuits from the input VDD3 supply.

IOVCC is 1.8~3.6V for Digital I/O.

VDDD and VDD5 are provided by internal circuit.

A decoupling capacitor(1uF) must be placed between each power pin and ground.

2.3 MCU

This section describes some critical features and operations supported by the ARM Cortex-M0 core MCU.

Figure 2-2 shows the overall structure of the MCU block. In addition to the enhanced MCU core, we have added the following circuits,

- Program Memory: 48KB Flash
- Data Memory: 48KB SRAM
- Timer: A number of timers are available to generate different clocks
- Master Clock: 24/ 48MHz from a 48MHz RC Oscillator or external crystal and PLL
- Clock Manager: To control various clocks under different operation conditions of the system

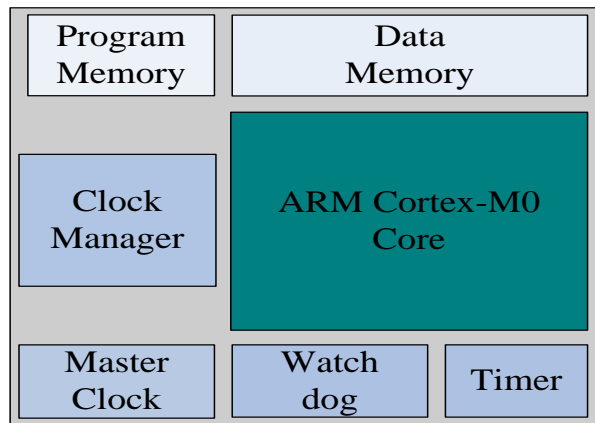

Figure 2-2 MCU Block Diagram

2.4 Operation Modes

FT5X26 operates for the Win8 spec or in the following three modes:

- Active Mode

When in this mode, FT5X26 actively scans the panel. The default scan rate is 60 frames per second. The host processor can configure FT5X26 to speed up or to slow down.

- Monitor Mode

When in this mode, FT5X26 scans the panel at a reduced speed. The default scan rate is 25 frames per second and the host processor can increase or decrease this rate. When in this mode, most algorithms are stopped. A simpler algorithm is being executed to determine if there is a touch or not. When a touch is detected, FT5X26 shall enter the Active mode immediately to acquire the touch information quickly. During this mode, the serial port is closed and no data shall be transferred with the host processor.

- Hibernate Mode

In this mode, the chip is set in power down mode. It shall only respond to the “RESET” signal from the host processor. The chip therefore consumes very little current, which help prolong the standby time for the portable devices.

2.5 Host Interface

Figure 2-3 shows the interface between a host processor and FT5X26. This interface consists of the following three sets of signals:

- Serial Interface
- Interrupt from FT5X26 to the Host
- Reset Signal from the Host to FT5X26

Figure 2-3 Host Interface Diagram

The serial interfaces is I2C or SPI. The details of this interface are described in detail in Section 2.6. The interrupt signal (/INT) is used for FT5X26 to inform the host that data are ready for the host to receive. The /RST signal is used for the host to reset FT5x26. After resetting, FT5X26 shall enter the Active mode.

2.6 Serial Interface

FT5X26 supports the I2C , SPI or USB interfaces, which can be used by a host processor or other devices.

2.6.1 I2C

The I2C is always configured in the Slave mode. The data transfer format is shown in Figure 2-4.

Figure 2-4 I2C Serial Data Transfer Format

Figure 2-5 I2C master write, slave read

Figure 2-6 I2C master read, slave write

Table 2-1 lists the meanings of the symbols used in the above figures.

P	STOP: the indication of the end of a packet (if this bit is missing, S will indicate the end of the current packet and the beginning of the next packet)

I2C Interface Timing Characteristics is shown in Table 2-2.

2.6.2 SPI

SPI is a 4 wire serial interface. The following is a list of the 4 wires:

- SCK: serial data clock
- MOSI: data line from master to slave
- MISO: data line from slave to master
- SLVSEL: active low select signal

SPI transfers data at 8bit packets. The phase relationship between the data and the clock can be defined by the two registers: phase and pole. Some data transfer examples can be found in Figure 2-7 to Figure 2-10.

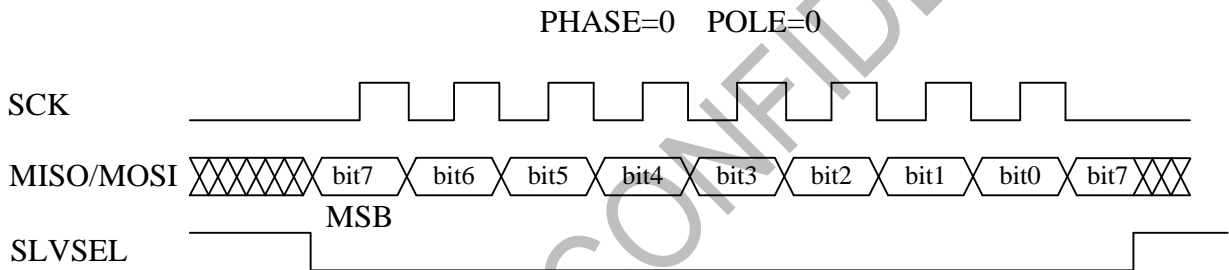

Figure 2-7 SPI Data Transfer Format (Phase=0, POLCK=0)

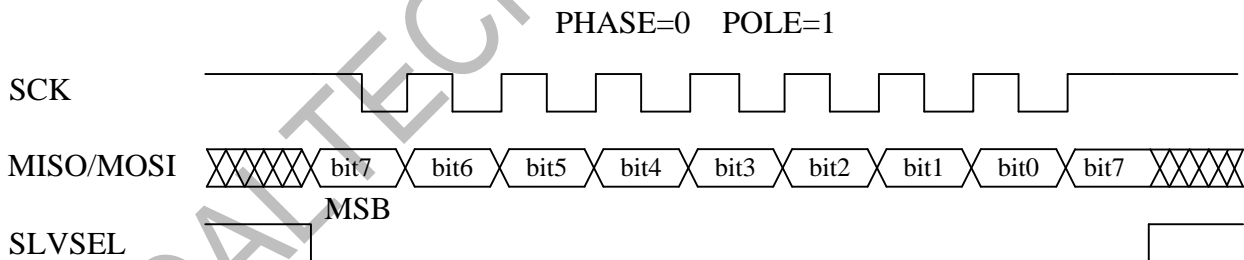

Figure 2-8 SPI Data Transfer Format (PHASE=0, POLCK=1)

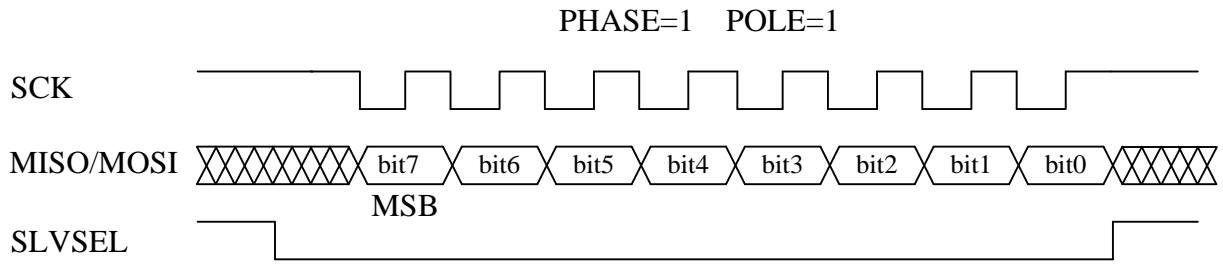

Figure 2-10 SPI Data Transfer Format (Phase=1, POLCK=1)

SPI can be configured into either Master or Slave mode via firmware. When in the Master mode, the SPI needs to supply the data clock, whose frequency relationship with the Master clock can be set by firmware. When it is configured in the Slave mode, the clock,

SCK, is supplied by the external Master. The maximum data clock frequency must not be higher than $\frac{F_{mclk}}{8}$.

SPI Interface Timing Characteristics is shown in the following Figure2-11, Figure2-12, Figure2-13, Figure2-14 and Table 2-3.

2.6.3 USB

USB is configured in device mode, and a Full speed USB function is supported. The USB function controller is as follows.

HIS DOCUMENT CONTAINS INFORMATION PROPRIETARY TO FOCALTECH SYSTEMS CO.,LTD., AND MAY NOT BE REPRODUCED, DISCLOSED OR USED IN WHOLE OR PART WITHOUT THE EXPRESS WRITTEN PERMISSION OF FOCALTECH SYSTEMS CO.,LTD.

- USB 2.01-compliant composite device , full speed (12Mbps) ;
- Require external crystal (12MHz) ;
- Support USB LPM L1;
- integrated transceiver;
- Support USB-HID protocol for Win8.
- Vendor ID: 0x2808

Notes

1.If used beyond the absolute maximum ratings, FT5X26 may be permanently damaged. It is strongly recommended that the device be used within the electrical characteristics in normal operations. If exposed to the condition not within the electrical characteristics, it may affect the reliability of the device.

2.Make sure VDDA(high)≥VSSA (low)

3.Make sure VDD (high)≥VSS (low)

3.6 POWER ON/Reset Sequence

Reset should be pulled down to be low before powering on and powering down. I2C/SPI shouldn't be used by other devices during Reset time after IOVCC powering on (T_{prt}). INT signal will be sent to the host after initializing all parameters and then start to report points to the host. If Power is down, the voltage of supply must be below 0.3V and T_{pdt} is more than 5ms.
