

# DOT MATRIX LCD 40-OUT SEGMENT DRIVER

#### **■ GENERAL DESCRIPTION**

The NJU6407C is a serial input, 40-out segment driver for dot matrix LCDs, especially useful as extension driver for LCD controller drivers like NJU6408B.

It consists of 40-bit (two of 20-bit) shift register, 40-bit latch, and 40 high voltage LCD drivers.

The shift direction of each 20-bit shift register can be set independently to each other, consequently the efficient extension driver allocation according to the number of characters and easy wiring with the LCD panel can be performed.

As the 40-driver have 4 level voltage inputs to drive the LCD, adjustable driving voltage according to the LCD panel can be supplied from the external power source.

#### **FEATURES**

- 40 Segment Drivers
- 40-bit Shift Register

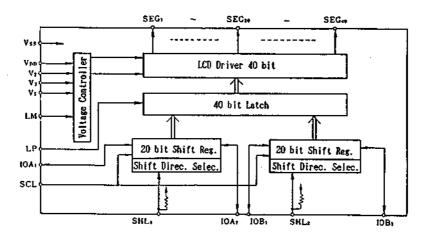

( Two of 20-bit Shift Registers )

Shift Direction of each 20-bit

Shift Registers Selection

- Two of Shift Direction Select Terminal
- Duty Ratio 1/8 to 1/16
- Fast Data Transmission ( Shift Clock 3.3 MHz Min. )
- External Power Supply for LCD Driving Voltage
- LCD Driving Voltage --- V<sub>DD</sub> 3V ~ V<sub>DD</sub> 13.5V
- Operating Voltage --- 5 V ± 10 %
- Package Outline --- QFP 56
- C-MOS Technology

### PIN CONFIGURATION

#### ■ TERMINAL DESCRIPTION

No.	SYMBOL	F U N C T L O N
1~20 22~41	SEG <sub>40</sub>	LCD segment driving terminal. Each terminal corresponds to each bit of shift register
21, 49 48	V <sub>DD</sub> Vss	Power supply terminal (connect to the controller's VDD terminal) Power supply terminal (connect to the controller's VSD terminal)
42 43	10B <sub>2</sub> 10B <sub>1</sub>	Data input/output terminals for 21st to 40th bits shift register. Display data is input (output) synchronized with clock pulse. Input or output is selected by SHL2 terminal.
<del>\$1</del>	10A2 10A1	Data input/output terminals for 1st to 20th bits shift register. Display data is input (output) synchronized with clock pulse. Input or output is selected by SHL, terminal.
45, 46 47	V <sub>5</sub> , V <sub>3</sub>	LCD driving power source terminals.
50	SCL	Shift register clock pulse input terminal. The data is shifted in the shift register by the falling edge of the clock pulse. A data setup time and hold time are required between data input and SCL. Clock pulse rising time (Trs) and falling time (Trs) should be set less than 50ns respectively.
52	LP	Latch pulse imput terminal. The data in the shift register is latched to the Latch by this signal. "H": Data writing, "L": Data latch
53	LM	Alternate signal input for LCD driving.
55	SHL	Shift direction and input/output control terminal(Pull-up R). "H" or Open: Shift direction is from 1st bit to 20th bit. "L": Shift direction is from 20th bit to 1st bit.
56	SHL2	Shift direction and input/output control terminal(Pull-up R). "H" or Open: Shift direction is from 21st bit to 40th bit. "L": Shift direction is from 40th bit to 21st bit.
54	NC	Non connection.

#### ■ FUNCTIONAL DESCRIPTION

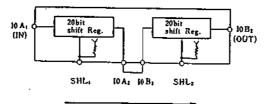

#### (1) Shift register control

The 40-bit shift register is divided into two of 20-bit shift register.

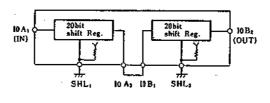

The shift direction of each 20-bit shift register can be set independently to each other shown in below.

Control Terminal	Input	Shift Direction		
Ott	"H" or Open	IOA₁ → 10A₂		
SHLı	″L"	10A₁ ← 10A₂		
011	"H" or Open	108₁ → 108₂		
SHL <sub>2</sub>	"L"	10B₁ ← 10B₂		

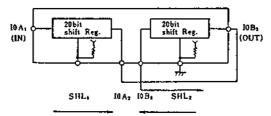

(1-1) When the terminals SHL, and SHL2 are "H" or open, the data shift from SEG1 to SEG40.

(1-2) When the terminals SHL1 and SHL2 are "L", the data shift from SEG40 to SEG1.

(1-3) Reversed sift direction to each other is also available.  $SEG_1 \rightarrow SEG_{20} \rightarrow SEG_{40} \rightarrow SEG_{21}$  example is shown in below:

#### (2) LCD driver output truth table.

Input Data	Selection/Non-selection	LM	Driver Output (SEG, to SEG <sub>40</sub> )
"H"		Н	V <sub>5</sub>
	Selection	L	Voo
"L"	Al	н	V <sub>3</sub>
	Non-selection	L	V <sub>2</sub>

#### MADE ABSOLUTE MAXIMUM RATINGS

( Ta=25°C )

PARAMETER	SYMBOL.	RATINGS	UNIT
Supply Voltage (1)	Voo	- 0.3 ~ + 7.0	٧
Supply Voltage (2) Note 1)	V <sub>DD</sub> ~ V <sub>5</sub>	V <sub>DD</sub> -13.5 ~ V <sub>DD</sub> +0.3	٧
Input Voltage	Vin	- 0.3 ~ V⊳⊳+0.3	٧
Operating Temperature	Topr	- 30 ~ + 80	υ
Storage Temperature	Tstg	- 55 ~ + 150	ొ

Note 1) The relation : Vop≧V₂≧V₃≧V₅ must be maintained.

#### **ELECTRICAL CHARACTERISTICS**
