

ORIENT DISPLAY MAKE THINGS POSSIBLE

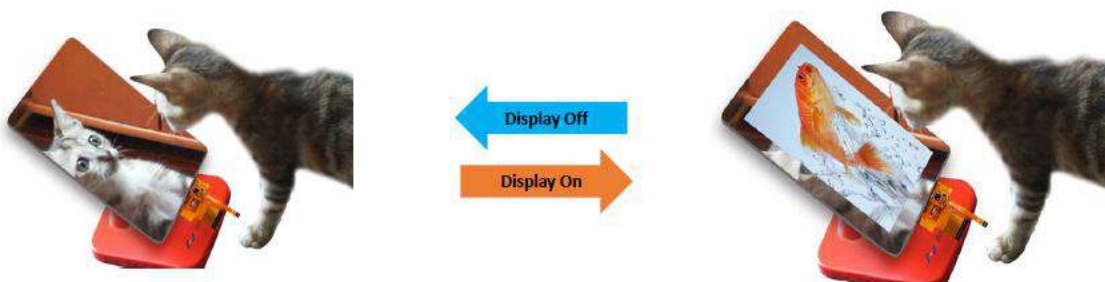

October 12th, 2023

Dear Valued Customers:

Hidden Panel or Hidden Display or Dead Front Display all refer to a type of display or panel that appears as they are not an information display at all while inactive or turned off. They become visible only when it is powered on. This type of display is commonly used in automotive and home appliances to provide information or user interfaces while maintaining an unobtrusive appearance when not in use.

Orient Display holds all the technologies to produce hidden panels with the appearance of black, white, and wood grain (yes, it is real, you can choose either smooth or wood texture texture) and mirror display. Hidden displays can be achieved by choosing IPS LCD display, AR coating, optical bonding, while others by choosing different kinds of films. Please find some examples shown below.

Please contact us (info@orientdisplay.com or sales@orientdisplay.com) for further information and questions.
